Subject: Electrolux
Attachments: Map of 2 wells EPA installed for Electrolux site.pdf

Recall, this map shows where we/EPA installed to roto-sonic monitoring wells. These wells again went 150 feet. I know they did not hit the channel, where would you pick a location? And depth? I do not want to place a well on-site and maybe create a pathway to a good water bearing unit. Besides like I said before.....we need to show hits of Electrolux constituents off-site and in the deeper channel showing connection to muni wells.

Also, we/EPA have not selected a remedy for this site.
